## *Journey Into 1963*

Through a newly devised telescope designed by Professor Elwayne Garrett and his assistant, Harding Gee, of the Hayes Scientific Laboratory we are able to look into the year 1963 and see what the graduating class of '43 are doing.

The telescope first points to Europe. In Berlin we see news analyst Ronald Behymer comparing notes with Doris McMullen, famous reporter, on the fall of Hitler—but wait, could that be Martha Thrall coming down the street, carrying her violin? Yes it is! She is in Europe on a concert tour with Mesdame Decker, the former Doris Heavner. Doris left Ray at home in Strathmore to take care of the pigs.

Now the telescope switches to Alaska where we see Billy Dobbs, the great electrical wizard, with his four wives, Nellie Rogers, Juanita Cotton, Myrlena Neve, and May Van Leer. Someone ought to tell him there's a law against bigamy.

Where are we now? Oh, we must be in California because there is Velta with her seven football playing sons. Those Campuses have company too. The guest list includes Phyllis and Jack Cantrell, Pat and Bill Van Beek, who live on adjoining ranches.

What are those little specks we see flashing from port to port in front of our telescope. It's none other than Dorothy Spain and the former Virginia Huie trying to keep up with their sailor husbands.

As we pass through Hawaii we see Betty Bohland giving a lecture on "The Rehabilitation of the Ant." Her audience knows nothing of what she is speaking, but that's all right with Betty. She doesn't know herself.

In China we see Janet Ullman and Mildred Hignite traveling under the foreign missionary society.

How did we get clear up here on the planet, Pluto. Why there's Herbie Basham, Denzil Dodson, and Harvey Tillery exploring the planet. They're trying to get away from women, but oh-oh, Laura Garman, Sybil Kirk, and Doricie Griffis have almost caught up with them. They've reached Mars 3 days ahead of schedule.

What's all that noise down in South America? Why it's Claude Ingersoll, Johnny Suhovy, Johnny Manning, and Melvin Moore; with their guitars and love songs they are thrilling all the señoritas. Keep up the good work, senors.

Back in the United States we see Louise Gonzales as head nurse at the Blake Sanitarium, and her patient is none other than Douglas Cowan. She tells us he is suffering from termite trouble in his peg leg.

Oh dear, I dropped the telescope from the top of Radio City trying to locate more members of the class of '43. I guess that's all we will be able to see for awhile.
